DOC\PAT\452

2. An electronic sign enclosure having a rail which can be secured to the edge of a seating deck or balcony and acts as a barrier, comprising:

a. an edge of a deck; and,

b. a rail located along and about an upper surface including a series of upper and lower brackets located along a rearwardly facing enclosure surface, each of which secures to metal mounting plates on the upper and lower surfaces at said edge of the seating deck, whereby the electronic sign enclosure having the rail is of sufficient height to prevent people from accidentally falling over the edge of the seating deck and serves as a safety barrier, which can be accessed by maintenance personnel without the interference or hinderance of a traditional seating deck barrier structure.
